

## COSMIC GUARD

Cosmic Guard has been designed to operate under a simple concept: invisible invincibility.

---

Unmetered attack mitigation, full TCP/UDP support, flexible BGP integration, low-latency, 5-second mitigation guarantee, and an industry aggressive 99.9% uptime SLA.

## Denial of Service Attacks

“DoS” and “DDoS” attacks are designed to bring your network to its knees - crashing it by flooding it with useless traffic, preventing your legitimate customers and clients from accessing their services.

“DDoS” attacks are “Distributed” DoS attacks, where multiple compromised systems, which are often infected with computer viruses and are part of a large illegal “Botnet”, are used to target your network to wreak havoc and compromise your products’ stability, reliability, and customer confidence.

Cosmic Guard stop ALL types of DoS and DDoS attacks dead in their tracks. Combining the strategically negotiated low-latency global networking of Cosmic Global Networks (<https://cosmic.global>) with custom proprietary traffic filtering hardware and software we have created a one-of-a-kind highly robust DDoS Mitigation product.

Cosmic Guard is your ideal solution, and can be applied to a wide variety of industries, including: eCommerce, Banking, SaaS, Streaming, Online Gaming, etc. Whatever your business is online, we will protect it.

## Network

Cosmic Guard utilizes the uniquely robust global connectivity community of Cosmic Global Networks. Boasting a network capacity exceeding one terabit per-second, designed for low, less than two millisecond latency adds to all types of services, and a blazing fast, industry leading zero-to-one second time-to-mitigation (TTM).

CAPACITY
